SUMMARY

Applied AI/ML engineer with an entrepreneurial mindset, building production systems from scratch, owning them end-to-end, and pushing through ambiguity until they ship. Production experience across predictive ML, RAG, and agentic LLM systems in a live healthcare SaaS product. Comfortable leading my own work, defining the approach, and engineering the path from data to deployed API.

TECHNICAL SKILLS

Language & Frameworks: Python, SQL, React.js, Typescript

Machine Learning & Statistics: Scikit-learn, XGBoost, PyTorch, TensorFlow, Random Forest, Decision Trees, Clustering, Feature Engineering, Model Evaluation, Hyperparameter Tuning, Statistical Modeling, Hypothesis Testing, A/B Testing.

GenAI & NLP: LLMs, RAG, LangChain, LangGraph, Vector Embeddings, Prompt Engineering, Agentic Workflows, SpaCy, Text Classification, Sentiment Analysis (RoBERTa).

Data Engineering & BI: Data Modeling, DBT, Fivetran, ETL Pipelines, PostgreSQL, MySQL, Power BI, Tableau.

Cloud & MLOps: AWS, Snowflake, REST APIs, Docker, CI/CD, GitHub Actions, Kubernetes.

WORK EXPERIENCE

AI/ML Engineering Intern, ProHealth Group, Atlanta GA

Jun 2025 – Present

- Built a production RAG chatbot with an agentic workflow for intent routing, business rule/schema retrieval, SQL generation, query execution, and answer summarization, reducing dashboard drill-through from hours to seconds.
- Shipped LLM-powered investigation workflows inside the launched Careflux Analytics SaaS product, surfacing cited root causes for operational and financial anomalies and saving an estimated \$100K annually.
- Productionized applications as REST APIs on AWS using Docker, Kubernetes, GitHub Actions, and CI/CD release workflows.
- Developed an XGBoost rehospitalization model with feature engineering and SMOTE-Tomek balancing, improving risk-targeting precision from 64% to 82%.
- Validated prompts, outputs, and compliance guardrails for regulated AI workflows, reducing hallucination and improving reliability before production release.

Research Assistant, Syracuse University, School of Information Studies

Jan 2025 – May 2025

- Fine-tuned a RoBERTa model via HuggingFace Transformers on AI adoption survey data to extract user segments and estimate organizational AI needs.
- Automated data cleaning, analysis pipelines, and Power BI dashboards, improving visibility into adoption patterns for research decision-making.

Data Analyst Intern, Krishna Jewels, India

Jun 2023 - Jun 2024

- Modeled a MySQL database of 15+ tables and 50K+ records across inventory, sales, suppliers, and accounting records, digitizing paper-based tracking and reducing lookup time by 70%.
- Flagged slow-moving inventory and repeat high-demand products from sales trends, helping adjust purchase quantities and improve profitability by 12%.
- Centralized cleaned sales, inventory, and accounting data into Power BI dashboards, reducing lookup time from hours to seconds.

ACADEMIC PROJECTS AND PUBLICATION

MyFinancial Advisor | Investment System

- Formulated a stock decision-support system using LSTM forecasting, feature engineering, and hyperparameter tuning to predict next-week price direction.
- Integrated market news, filings, and financial signals into an LLM + RAG workflow, generating recommendations users could verify through evidence-based Q&A.

JobFlow AI | Job Application Assistant

- Implemented a full-stack job application assistant using React and TypeScript, with structured data models, user workflows, and application tracking logic.
- Deployed backend APIs and LLM workflows with OAuth, RBAC, S3 storage, and Render hosting, increasing daily application throughput from 8 to 20.

KarmaScore Predictor | Customer Churn Analysis

- Constructed a churn prediction system on 10K+ subscription records using XGBoost, behavioral feature engineering, and SHAP-based interpretation, reaching 89% precision and translating churn drivers with targeted retention actions through a Streamlit dashboard.

Annual Report Analysis with Advanced Language Models: A Stock Investment Strategy Enhancement

- Published an IRJET paper after processing 50+ annual reports and using GPT-3.5 Turbo to generate structured responses to analyst-style questions on investment trends and report interpretation.

EDUCATION

Master of Science | Information Systems

May 2026

Syracuse University, School of Information Studies, Syracuse, NY

Bachelor of Engineering | Information Technology

May 2024

Thadomal Shahani Engineering College, India
